

# My standalone app has stopped working

If your standalone application no longer works after you have made an update/upgrade or for other reasons, you could try to do the following:

## Caching Configuration

```
php artisan config:cache
```

## Caching Routes

```
php artisan route:cache
```

## Clear views

```
php artisan view:clear
```

## Clear cache data

```
php artisan cache:clear
```

## Terminate Horizon

```
php artisan horizon:terminate
```

I will be restarted by your process monitor and receive your code changes
