In your Standalone or Laravel app

Updating Mixpost is a simple task that can be executed in a few steps. This guide will provide you with the necessary steps to update Mixpost.

```
composer update inovector/mixpost-enterprise inovector/mixpost-pro-team
```

After the update is complete, clear the cache by running the following command:

```
php artisan route:cache
php artisan view:clear
php artisan mixpost:clear-settings-cache
php artisan mixpost:clear-services-cache
```

Finally, terminate the Horizon process by running:

```
php artisan horizon:terminate
```

Done!

You can check the version of Mixpost by running the command:

```
composer show inovector/mixpost-enterprise
```

Or just log in to your Mixpost dashboard and Navigate to Admin Console -> Status
