

Scripts Settings

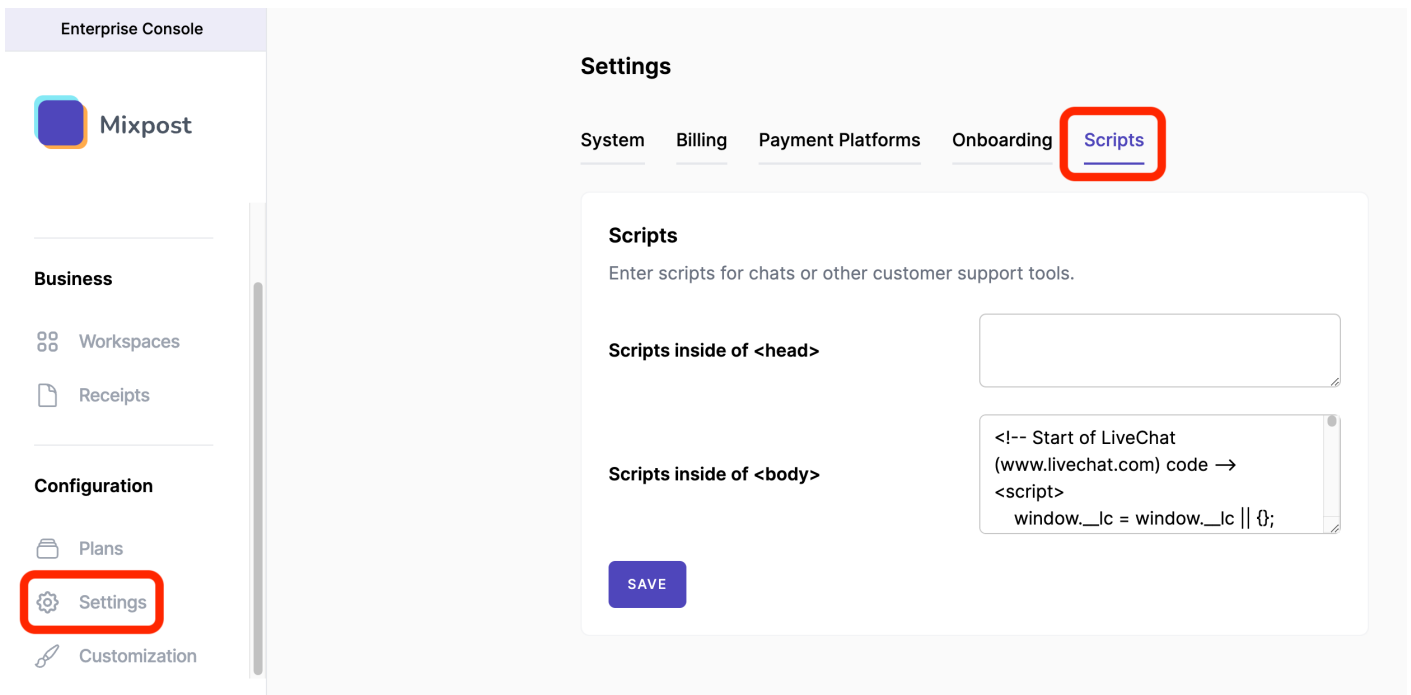

In SaaS, it is normal to have a live chat for support, and there are many online solutions like this. The integration is very simple, it is necessary to place the **"JS"** or **"HTML"** script offered by these tools.

The live chat tools we recommend:

- **LiveChat** - 10% off first payment
- **Tidio**

Mixpost Enterprise allows you to easily insert **"JS"** or **"HTML"** scripts.

1. Go to **"Enterprise Console"** (left-bottom user menu)
2. Click on **"Settings"** (left sidebar)
3. Here you will see the **"Scripts"** tab item. Click on it.
4. Made the changes.
5. Save changes by clicking on the **"Save"** button.

The screenshot shows the 'Enterprise Console' interface. On the left sidebar, under the 'Configuration' section, the 'Settings' option (represented by a gear icon) is highlighted with a red rectangle. The main content area is titled 'Settings' and features several tabs: 'System', 'Billing', 'Payment Platforms', 'Onboarding', and 'Scripts'. The 'Scripts' tab is selected and also highlighted with a red rectangle. Below the tabs, the 'Scripts' section is displayed, with the instruction 'Enter scripts for chats or other customer support tools.' There are two text input fields: 'Scripts inside of <head>' and 'Scripts inside of <body>'. The '<body>' field contains a pre-defined LiveChat script: `<!-- Start of LiveChat (www.livechat.com) code --> <script> window.__lc = window.__lc || {};`. A blue 'SAVE' button is located at the bottom left of the script configuration area.
