Upgrading from Pro to Enterprise

Theoretically, this upgrade should go smoothly and without data loss. But before upgrading, we recommend that you back up your storage and MySQL volume in case something goes wrong.

Docker

1. Navigate to your folder where you have the `docker-compose.yml`.
2. Replace "**inovector/mixpost-pro-team:latest**" image with "**inovector/mixpost-enterprise:latest**"
3. Ensure the license key set in the environment "**LICENSE_KEY**" belongs to the Enterprise package.

The "**mixpost**" service should look like this:

```
mixpost:
    image: inovector/mixpost-enterprise:latest
    environment:
        LICENSE_KEY: 'your_enterprise_license_key'
        APP_URL: https://your-domain.com
        APP_KEY: example_secret_key
        DB_DATABASE: 'example_db_name'
        DB_USERNAME: 'example_db_user'
        DB_PASSWORD: 'example_db_password'
    ports:
        - 9000:80
    volumes:
        - storage:/var/www/html/storage/app
    depends_on:
        - mysql
        - redis
    restart: unless-stopped
```

Pull the image and recreate the containers with the following commands:

```
# Pull the latest version
docker-compose pull

# Stop and remove the old container
docker-compose down

# Start a new container
docker-compose up -d
```

In your Standalone or Laravel app

Delete the Pro package

```
composer remove inovector/mixpost-pro-team
```

If you installed Mixpost Pro using the Standalone app, may appear some error after removing it. No need to do anything, just skip it.

```
ERROR  Command "mixpost:publish-assets" is not defined. Did you mean one of these?
  ↳ mixpost:publish
  ↳ mixpost:setup-gitignore
Script @php artisan mixpost:publish-assets --force=true handling the post-update-cmd event returned with error code 1
```

Install the Enterprise package

```
composer require inovector/mixpost-enterprise "^1.0"
```

After installing the Mixpost Enterprise package, you may execute this command:

```
php artisan mixpost-enterprise:install
```

At the question "**Would you like to run the migrations now? (yes/no)**" answer with "**yes**".

Next, it will ask you to create an admin user. If you already have one, you can cancel cancel the command.

To ensure that assets get republished each time Mixpost Enterprise is updated, we strongly advise you to add the following command to `post-update-cmd` the `scripts` section of your `composer.json`.

```
"scripts": {
    "post-update-cmd": [
        ...
        "@php artisan mixpost-enterprise:publish-assets --force=true"
    ]
}
```

Exclude payment webhook handler route From CSRF Protection by adding the URI "***/payment-webhook**" to the **$except** property of the VerifyCsrfToken middleware:

```php
<?php

namespace App\Http\Middleware;

use Illuminate\Foundation\Http\Middleware\VerifyCsrfToken as Middleware;

class VerifyCsrfToken extends Middleware
{
    /**
     * The URIs that should be excluded from CSRF verification.
     *
     * @var array<int, string>
     */
    protected $except = [
        '*/payment-webhook'
    ];
}
```

Modify the schedule command

In the console kernel (`app/Console/Kernel.php`):

1. Remove "**\Inovector\Mixpost\Schedule::register($schedule)**" command.
2. Add "**\Inovector\MixpostEnterprise\Schedule::register($schedule)**" command.

```php
    protected function schedule(Schedule $schedule): void
    {
```

```
        // Remove or comment this command
        # \Inovector\Mixpost\Schedule::register($schedule);

    // Insert new command
    \Inovector\MixpostEnterprise\Schedule::register($schedule);

        $schedule->command('horizon:snapshot')->everyFiveMinutes();
        $schedule->command('queue:prune-batches')->daily();
    }
```

Clear cache

```
php artisan route:cache
php artisan mixpost:clear-settings-cache
php artisan mixpost:clear-services-cache
```

Terminate the Horizon process

```
php artisan horizon:terminate
```

The supervisor will start it automatically.

Conclusion

After you've upgraded to Enterprise, you can configure the settings for your business.
